Brainstorm & Idea Prioritization Template

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. For this project, the brainstorming activity focuses on identifying practical ideas to automate and standardize the incident management lifecycle using ServiceNow.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected Problem Statement

IT incidents require a structured process for creation, classification, assignment, investigation, escalation, resolution, and documentation. A standardized ServiceNow workflow can automate these activities, reduce manual effort, improve collaboration, and provide clear tracking of incidents and SLAs.

Project Requirements

Software Requirements

- ServiceNow instance (Personal Developer Instance or Enterprise Instance)
- Incident Management and Service Operations Workspace
- Agent Assist and Knowledge Management support
- Change Management and SLA tracking

Hardware Requirements

- Standard desktop or laptop computer
- Minimum 4 GB RAM (8 GB recommended)
- Stable internet connection

Step-2: Brainstorm, Idea Listing and Grouping

The following ideas were generated and grouped according to the main activities involved in the incident management lifecycle.

Incident Management

- Create and classify incidents in Service Operations Workspace.
- Capture caller, category, subcategory, urgency, service, service offering, and CI details.

- Assign incidents to the Service Desk and appropriate Level 2 support teams.

Knowledge Integration

- Use Agent Assist to identify relevant knowledge articles.
- Attach useful articles to incidents and record helpful feedback.

Escalation

- Reassign incidents to Network or other Level 2 support teams for investigation.
- Maintain work notes, watch lists, and assignment information.

Change Management

- Create emergency change requests directly from incidents when required.
- Link change requests to incidents for traceability.

Child Incident Management

- Create child incidents for recurring or related issues.
- Track parent-child relationships through Related Records.

Resolution

- Document probable cause, resolution code, and resolution notes.
- Resolve incidents after corrective action is completed.

Knowledge Creation

- Create reusable Knowledge Articles from resolved incidents.

Tracking

- Track SLA status, related records, activity history, and incident progress.
- Provide visibility across Service Desk, Level 2 Support, and Change Management.

Step-3: Idea Prioritization

The ideas are prioritized based on their importance to the project and their feasibility within a ServiceNow Personal Developer Instance.

Idea	Importance	Feasibility	Priority
Incident creation & classification	High	High	1
Agent Assist knowledge integration	High	High	2
Level 2 reassignment & escalation	High	High	3
Emergency change request integration	High	High	4
Child incident & SLA tracking	Medium	High	5

Final Selected Idea

Automate the Incident Management lifecycle using ServiceNow by integrating incident classification, Agent Assist knowledge support, Level 2 escalation, emergency change requests, child incidents, resolution documentation, Knowledge Article creation, and SLA tracking.

Reason for Selection

This idea is selected because it directly addresses the incident management problem, reduces manual processing, provides a structured escalation and resolution process, and is feasible to implement using the available ServiceNow features.
