Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	5 September 2026
Team ID	Individual
Project Name	Automated Incident Management Lifecycle using ServiceNow
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	**Incident Record Creation**	Create and save an incident in Service Operations Workspace. Capture caller and short description details. Provide a standard incident record for tracking.
FR-2	**Incident Classification**	Capture category, subcategory, urgency, service, service offering, and configuration item. Record classification work notes and assignment information.
FR-3	**Knowledge Integration & Escalation**	Use Agent Assist to display relevant Knowledge Articles. Allow agents to attach helpful articles and reassign incidents to appropriate Level 2 support groups.
FR-4	**Investigation & Change Integration**	Allow Level 2 technicians to investigate and update the incident. Create an emergency change request directly from the incident when required.
FR-5	**Child Incident & Resolution**	Create child incidents for recurring or related issues. Document probable cause, resolution code, and resolution notes, then resolve the incident.
FR-6	**Knowledge Creation & SLA Tracking**	Create a Knowledge Article from a resolved incident. Track SLA status, activity, change records, child incidents, and other related records.

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	**Usability**	The incident form and Service Operations Workspace should be clear, consistent, and easy for Service Desk agents to use.
NFR-2	**Security**	Only authorized users should access incidents, knowledge, changes, and related records, following organizational access controls.
NFR-3	**Reliability**	The workflow should consistently preserve incident, assignment, activity, change, child-incident, and resolution information throughout the lifecycle.
NFR-4	**Performance**	Incident creation, classification, Agent Assist retrieval, assignment, and related-record actions should complete within an acceptable response time.
NFR-5	**Availability**	The ServiceNow Incident Management workflow should be available to Service Desk and support teams when incidents need to be created or resolved.
NFR-6	**Scalability**	The solution should support increasing numbers of incidents, support groups, related records, knowledge articles, and SLA-tracked activities without major redesign.
