Project Design Phase

Proposed Solution

Date	7 September 2026
Team ID	Individual
Project Name	Automated Incident Management Lifecycle using ServiceNow
Maximum Marks	2 Marks

Proposed Solution :

S.No.	Parameter	Description
1	**Problem Statement (Problem to be solved**	IT incidents can be reported through different channels and may contain incomplete or inconsistent information. Manual classification, reassignment, troubleshooting, and follow-up can make ownership, resolution progress, and SLA tracking difficult.
2	**Idea / Solution description**	Create a standardized ServiceNow Incident Management workflow in Service Operations Workspace. The agent creates the incident, captures caller and short description, and classifies Category, Subcategory, Urgency, Service, Service Offering, and Configuration Item. Agent Assist provides relevant Knowledge Articles. The incident can be reassigned to Level 2 support, linked to an emergency change, and used to create child incidents. Cause and resolution are documented before the incident is resolved.
3	**Novelty / Uniqueness**	The solution connects the major Incident Management activities in one ServiceNow lifecycle: standardized classification, Agent Assist knowledge, Level 2 escalation, emergency change integration, child-incident tracking, resolution documentation, Knowledge Article creation, and SLA / related-record visibility.
4	**Social Impact / Customer Satisfaction**	End users receive clearer incident tracking and improved visibility of progress. Service Desk agents get standardized intake and knowledge support. Level 2 teams receive complete incident information and clear ownership. The organization benefits from better communication, documented resolutions, and more consistent service delivery.
5	**Business Model (Revenue Model)**	This is an internal IT service-management solution rather than a commercial product. It supports organizational efficiency by reducing manual coordination, improving incident handling, reusing knowledge, supporting SLA compliance, and providing structured change and incident records.
6	**Scalability of the Solution**	The solution can be extended to additional services, configuration items, support groups, knowledge bases, incident categories, SLA policies, and workflow conditions. ServiceNow configuration, Flow Designer, Business Rules, Related Lists, and platform-based records allow the process to grow as incident volume and organizational needs increase.
